                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence represents human PRO347 (UNQ306), a 50.5 5 kDa protein (pI 8.44) encoded by the novel cDNA clone DNA44176 (see AAX87260). Amplification of DNA44176 was observed in various tumour lines, suggesting a role in tumour formation and growth. Antagonists (e.g. antibodies) directed to PRO347 may have use in cancer therapy. The invention identifies 14 genes (see AAX87254-67) that are amplified in the genome of tumour cells. Such amplification is expected to be associated with overexpression of the gene product and to contribute to tumorigenesis. The encoded proteins (see AAY06477-90) may be useful targets for the diagnosis and/or treatment (including provention) of certain cancers, and may act as predictors of the prognosis of tumour treatment. Antibodies that bind the proteins are claimed and used in claimed cancer diagnostic kits.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 20-NOV-1998;

                                                                                                                                                                                                                                                                                                                               The present invention describes nucleic acids encoding PRO secreted and transmembrane proteins used therapeutically. The PRO proteins have cytostatic, anti-inflammatory, anti-prolliferative and immunosuppressive activity. The proteins and polynucleotides can be used in therapy, identification of homologues, raising antibodies and design of probes and primers. They can be used in a range of diseases related to proteins that they have homology with, e.g. a PRO protein having homology to complement proteins may be used in inflammatory responses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  01-DEC-1998;

                                                                                                                                                                                                                                                                                                                                                                       The present sequence encodes a novel human polypeptide. The specification describes novel polypeptides designated PRO201, PRO292, PRO327, PRO1055, PRO344, PRO347, PRO347, PRO3157, PRO1112, PRO1059, PRO853 and PRO882. These genes are amplified in the genome of tumour cells. The polypeptides are believed to contribute to tumourigenesis. The polypeptides are useful target for the identification of certain cancers, and may act as predictors of the prognosis of tumour treatment. Antibodies against these polypeptides are useful in the treatment and diagnosis of neoplastic cell growth and prognosis of tumour treatment and diagnosis of neoplastic cell growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       30-NOV-1999;

                                                                                                                                                                           prophylactically to treat/prevent disorders associated with aberrant T139 CC expression or activity, especially proliferative or differentiative CC disorders, e.g. of the immune system. They can be used to modulate CC spermatogenesis, e.g. as a contraceptive to decrease spermatogenesis or CC be useful to treat testicular disorders e.g. testicular cancer. The CC polypeptides may be used to identify selectively binding compounds which CC may be useful for detecting the polypeptides in samples; and identifying CC compounds modulating polypeptide activity. The polynucleotides are useful CC polynucleotides which may be useful for detecting the polypeptides to the CC polynucleotides which may be useful for detecting the polynucleotides are useful CC asample, gene mapping; identifying cells or tissues expressing aberrant CC identify subjects at risk for or having a disorder associated with T139 CC expression or activity and to monitor therapeutic interventions; and for producing antisense sequences for therapeutic administration to modulate CC producing antisense sequences for therapeutic administration to modulate

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             망
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT 6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC polynucleotides and its complementary sequences may also be used as DNA CC probes in diagnostic assays and also used in gene therapy. The CC polypeptides may also be used as antigens in the production of antibodies CC and in assays to identify modulators of polypeptide expression and CC activity. The polypeptides and nucleic acids may be used as nutritional CC supplements, to modulate cytokine and cell proliferation activity, to CC modulate immune stimulation or suppression (e.g. for the treatment of CC microbial infections and autoimmune disorders such as multiple sclerosis, to modulate insulin dependent diabetes), to modulate tissue growth activity (e.g. for the treatment of CC treatment of Parkinson's disease, Huntington's disease and Alzheimer's CC disease), to modulate chemotactic and chemokinetic activity, to modulate chemotactic activity, to modulate receptor CC ligand activity, to modulate inflammation and to inhibit tumour growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches 442;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is human protein with hydrophobic domain, HP10760. The polynucleotide and polypeptide of the invention may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The polynucleotides may be used to produce the polypeptide, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human proteins with hydrophobic domains and the nucleic acids encoding them, useful for preventing diagnosing and treating e.g. cancer, Alzheimer's and inflammation -

Novel TANGO polypeptides and nucleic acid molecules useful as modulating agents in regulating cellular processes and for diagnosing and treating heart, liver, lung, kidney, inflammatory and cellular proliferative disorders proliferative disorders

Claim 49; Fig 1; 138pp; English.

cultivouer characterises by their adeliant expression of activity. The cartivodies are useful as modulating agents in regulating a variety of cellular processes e.g. cell proliferation and/or cell differentiation. GC TANGO-139 is useful for treating kidney defects such as kidney failure, rango-125 is useful in wound healing and for treating cancer, TANGO-110 is useful for treating neoplasia. TANGO-177 or WDNM-2 is useful for cerebrovascular disease, and tumours, and injury or trauma cerebratitis, cerebrovascular disease, and tumours, and injury or trauma cerebratic heart disease, cardiovascular disorders, such as ischaemic pancreatitis, cerebrovascular disease, and tumours, and injury or trauma cerebratic heart disease, cardiovascular disorders, such as ischaemic cerebratic place of the state of the state of the endometrial disorders, such as ischaemic cerebratic place of the endometrial disorders, such as ischaemic cerebratic place of the endometrial disorders are useful to treat disorders, hyperplasia of the endometriam. TANGO-110 is useful to treat spleen, e.g., the fetal spleen, associated diseases and disorder. TANGO-125 treats prostate disorders, such as inflammatory disorders. TANGO-175, or disease and tumours. TANGO-139, 125, 110, 175 or WDNM-2 are useful for cereating proliferative disorders, inflammatory disorders. TANGO-175, or wDNM-2 activity also include apoptotic disorders, rheumatoid arthritis, systemic lupus erythematosus, insulin-dependent diabetes mellitus, cancer set and apoptotic disorders. The nucleic acids of the invention constraints of the invention disorders and inflammatory disorders of the invention are useful to react are useful to react are useful to react and used in gene therapy. The present sequence is human T139 protein. The invention relates to nucleic acids encoding a variety of proteins human T139 (TANGO-139), T125 (TANGO-125), T110 (TANGO-110), murine T175 (TANGO-175), human T175 or murine WDNM-2, having diagnostic, preventive, therapeutic and other uses. Polypeptide of the invention has the ability to inhibit a proteinase activity, to modulate cell-cell interactions, haematopoiesis and the ability to modulate clotting. Polypeptide and polynucleotide of the invention are useful for diagnosing and treating disorder characterised by their aberrant expression or activity. The antipolice are useful as modulation are not in requirement a various of

                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         molecules have been determined. Primers for synthesising the full length CDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a polypeptide encoded by a full length human cDNA of the invention.

Note: The sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 8; SEQ ID NO 2851; 1380pp + sequence listing; English

                This is the mature protein sequence of the human T139 polypeptide. The CT T139 polypeptide can be expressed by standard recombinant methodology. CT The T139 cDNA insert is deposited with ATCC under accession number CC 98694. The T139 polypeptides and polynucleotides can be administered CC therapeutically or prophylactically to treat/prevent disorders associated CC with aberrant T139 expression or activity, especially proliferative or CC differentiative disorders, e.g. of the immune system. They can be used to CC modulate spermatogenesis, e.g. as a contraceptive to decrease CC spermatogenesis or to treat disorders related to defects in sperm-egg CC fusion. They may also be useful to treat testicular disorders e.g. CC testicular cancer. The polypeptides may be used to identify selectively conding compounds which may be useful for detecting the polypeptides in CC samples; and identifying compounds modulating polypeptide activity. The CC polynucleotides are useful for producing probes or primers that CC selectively hybridize to the polynucleotides which may be useful for detection the content of the polynucleotides which may be useful for detection the polynucleotides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁

                                                            В
                                                                                                                                                                                                                                                                                                                                                       contractivity cerebrovascular disease, and tumours, and injury or trauma to the brain. TANGO-125, 110, 175 molecules treat heart disorders, e.g., cischaemic heart disease, cardiovascular disorders, such as ischaemic heart disease. TANGO-139, 125, 110 and 175 molecules are useful to treat crenal (kidney) disorders, such as glomerular disease (e.g., acute and chronic glomerularephritis), TANGO-175 is useful to treat uterine contract the contract of the endometrium. TANGO-110 is useful to treat spleen, e.g., the fetal spleen, associated diseases and disorder. TANGO-125 treats prostate disorders, such as inflammatory diseases, Crohn's contracting proliferative disorders, inclammatory disorders. TANGO-175, or CMDNM-2 activity also include apoptotic disorders. TANGO-175, or content in the contract of the contract disorders, e.g., immunodeficiency disorders, viral contents and apoptotic disorders. The nucleic acids of the invention care used in gene therapy. The present sequence is human T139 mature

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to nucleic acids encoding a variety of proteins human T139 (TANGO-125), T110 (TANGO-110), murine T175 (TANGO-175), human T175 or murine WDNM-2, having diagnostic, preventive, therapeutic and other uses. Polypeptide of the invention has the ability to inhibit a proteinase activity, to modulate cell-cell interactions, haematopoiesis and the ability to modulate clotting. Polypeptide and polynucleotide of the invention are useful for diagnosing and treating polynucleotide of the invention are useful for diagnosing and treating disorder characterised by their aberrant expression or activity. The antibodies are useful as modulating agents in regulating a variety of cellular processes e.g. cell proliferation and/or cell differentiation. TANGO-139 is useful for treating kidney defects such as kidney failure, TANGO-125 is useful in wound healing and for treating cancer, TANGO-110 is useful for treating neoplasia, TANGO-17 or WDNM-2 is useful for treating cancer, are useful to treat pancreatic disorders, such as traumed the process of the contraction of the contractio
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel TANGO polypeptides and nucleic acid molecules useful as modulating agents in regulating cellular processes and for diagnosing and treating heart, liver, lung, kidney, inflammatory and cellular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 50;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Holtzman DA,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               23-APR-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               В
                       The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy technique to restore normal activity of (II) or to treat disease states involving

(II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at fire, wipo.int/pub/published_pct_sequences.

D,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC Phe invention relates to isolated polynucleotide (I) and CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CPCN primers of the production of (II) and gene mapping, and in recombinant production of (II). The CPCN primers of genes are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC trestore normal activity of (II) or to treat disease states involving CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as a foot supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating CC diagnostics involving aberrant protein expression or biological activity. CC The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity CC and to produce other types of data and products dependent on DNA and CC amino acid sequences. ABG00010-ABG30377 represent novel human CC diagnostic amino acid sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed CC specification, but was obtained in electronic format directly from WIPO CC at fig. wipo.int/pub/published_pct_sequences.

                                                                          Qy
                                                                                                                                                                                                                          CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC polymerase chain reaction (PCR) primers of (II). The CC polymerase chain reaction (PCR) primers of (II) and (II). The CC polymerase chain reaction of (II) is useful in gene therapy techniques CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II), (II) is useful for generating antibodies against it, detecting or CC (II), (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as CC a food supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II), (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity CC and to produce other types of data and products dependent on DNA and CC amino acid sequences. ABG00010-ABG30377 represent novel human CC diagnostic amino acid sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed CC specification, but was obtained in electronic format directly from WIPO CC at ftp. wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        B
             The present sequence is that of human protease and associated protein-9 (PPRG-9), which is expressed in urologic and musculoskeletal tissues. It is encoded by cDNA identified in Incyte clone 998626 derived from KINNTUTO1 cDNA library. Anti-PPRG antibodies can be used as therapeutic antagonists, reagents for diagnosis and monitoring diseases and for isolating PPRC. PPRG nucleotide sequence can be used as probe or primer for diagnosis and monitoring of PPRG-related as probe or primer for diagnosis and monitoring of PPRG-related

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating
                                                                                                                                                                                                                         Claim 20;
                                                                                                                                                                                                                                                                New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess

Вb ρy В δÃ Дb δÃ DЪ δÃ DЪ οy 88888888888888 δõ Query Match 29.1%; Score 735; DB 22; Best Local Similarity 48.6%; Pred. No. 1.5e-47; Matches 159; Conservative 3; Mismatches 21; disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO as for this patent did not appear in the printed appear in Sequence at ftp.wipo.int/pub/published_pct_sequences. 333 LETTNEVIDSDFETRNFWIGREHMGAASAGKRGQKGSWQQTPGSEWANLDYPGPGLTYKT 392 298 PFHTCDLRIDGDCFMVSSEAD-----TYYRAR------353 LETTNEVTDSDFETRNFWI------213 QIKECADEPVGKGYMVSCLVDHRGNITEYQCHQYITKMTAIIFSDYRLICGFMDDCKNDI 272 393 AKDSFRWATGEHQAFTSFAFGQPDNHG 419 AKDSFRWATGEHQAFTSFAFGQPDNHG 404 493 AA; Length 493; Indels 144; Gaps ---GLTYKT 377 324 6;
